

MAKING DATA REVIEW MORE COMPREHENSIVE/EASIER

A starting point rather than an end point!

The Goal:

Facilitate review of data to identify problems during experiments.

Two Components

- ❶ Capabilities to generate a fixed set of plots that can be reviewed quickly for initial inspection of key measurements.
 - (a) Implemented in scripts that produce standard sets of plots.
 - (b) See “Data Review”
- ❷ A shiny app (“QAtools”) that supports interactive generation of plots.
 - (a) A Shiny Server on the RAF ground station supports this app.
 - (b) Requires project-specific set-up.
 - (c) GitHub is used for the reference repository.
