Math Conventions
focus on what might seem different

Operator precedence:

- :: $ [ ] PEU: %x% (MD)(AS) and L-to-R priority if equal

R input and response:

```
:: package ref. [ggplot2::...]
$ named column [e.g., DF$X]
[] indexing -- e.g., DF[3,6]
P parentheses (above math ops)
E exponentiation [x^y]
U unary operators; e.g., [-x]
%..% special ops, incl modulus
(MD) [*/] equal priority
(AS) [+-] equal priority
```
