Routines that duplicate processing:
(Useful for checking new algorithms or recoded processing)

Functions that duplicate normal processing

1. WindProcessor(): calculates wind variables
2. Various functions for standard variables, including
   (a) AirTemperature()
   (b) EquivalentPotentialTemperature()
   (c) BoltonEquivalentPotentialTemperature() [the old calculation]
   (d) MurphyKoop(): water vapor pressure
   (e) MachNumber()
   (f) etc, – many more
3. GeoPotHeight(): geopotential height
4. KingProbe(): liquid water content calculation
5. etc. – see ?Ranadu index for list
