OTHER WAYS (ESP. AVOIDING LATEX):

Still using knitr: Rmd document using Markdown

- Similar in concept, but code-segment identifiers are different and the output is normally an HTML document but can be PDF or Word/Libreoffice.
- Many Markdown items like \alpha are LaTeX-like but easier to learn.
- FRAPPE-AOA.Rmd shows the same document as before but in Markdown.
- Accepts HTML code as well as Markdown.
- Good alternative to using LaTeX
- You can also generate presentations in Markdown.
